

Input required: Proposed cardiovascular models of care

CSL publishes proposed model of care for future
cardiovascular service provision in London

Please review the proposed model of care and provide
your comments.

Commissioning Support for London (CSL) has published its proposed model of care for future cardiovascular service provision in London. The work focuses on three key areas: vascular surgery, cardiac surgery and cardiology.

The model of care has been developed following a comprehensive assessment of how services are currently provided in the capital, a robust review of clinical evidence and a review of national and international best practice.

Your input is critical!

Please review the [cardiovascular documents](#) and respond to the [online survey](#) by the 31st October deadline.

Have your say at CSL's GP engagement event on 29th September. [Register online](#) to attend.

Online documents

- [Model of care summary](#)
- [Supporting documentation](#), including:
 - The case for change
 - Co-dependencies framework
 - Finance paper
 - Model of care
 - The patient perspective

The [South London Cardiac and Stroke Network](#) works with organisations and individuals across South London to improve cardiac and stroke care.
